CSE 1112 Structured Programming Language Laboratory
Section B
Summer 2021
Assessment 5

1. Write a program that takes a string and a character as input from the user and prints the number of occurrences of that character in the string as output. You have to use the function **count_char** that takes the string and the character as parameters and returns the number of occurrences to main function.

   Sample Input:

   Enter string: Hello World
   Enter character : o

   Sample output:

   The character o occurs 2 times in the string.
